

# ORDERING KNOX FDC CAPS

## WHAT ARE KNOX CAPS?

Because Fire Department Connections (sprinkler and stand-pipe) are the life line to a building's fire protection, keeping them clear of debris and/or freezing temperatures is critical when fire departments need to supplement the water supply for maximum fire fighting efficiency. Unfortunately, standard FDC caps and plugs offer limited protection, because they are easily broken or stolen, leaving the FDC open to garbage, animals, and freezing weather. Knox Caps solve these issues by design. Made of stainless steel, they feature key wrench locks that only fire departments can access.

Every Week More Jurisdictions are on-boarded as Express. For more information or to place an order, call your Account Manager today.

## CAN THESE CAPS BE USED ANYWHERE?

No. Knox has a list of "Express Jurisdictions" who have already agreed to using these special caps. If a city is not listed, you need to coordinate with your local fire department before installing (see flow chart below).
